

KOREK

TECH WORLD

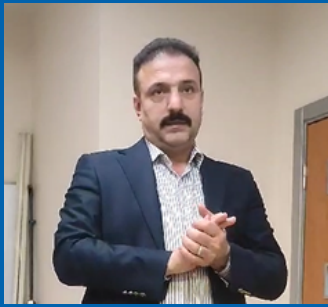

Local University students get an in-depth tour at the famous Korek Telecom company, along with detailed explanations on how their services and technologies work.

EXCLUSIVE INTERVIEW

After reaching out to a couple of students, we managed to get someone who was willing to provide us with a walk through of the visit, starting from when they left the university. They stated: "We left by bus at around 10 a.m, and we arrived about 20 minutes later. We went into the building where we were welcomed by some of the employees, and afterwards, we went up to the fifth floor where we were instructed to sit down."

"After some time, a man walked in and introduced himself, saying that he goes by the name Mr.Taha, and that he is the head of the technical department. He gave us a talk on what waves are and how they're emitted by basically everything we use in our daily lives, such as our phones, computer, and other technologies. He talked about many different kinds of waves, such as RF waves, short-range radio waves and EMFs given off by phone towers."

**MR.TAHA
HEAD OF
TECHNICAL
DEPARTMENT**

**MR.MUHAMMAD
RF ENGINEER**

“Afterwards, we got a second talk from another employee, who was called Mr.Muhammad, and he was an RF, or radio frequency, engineer. He told us about how networks evolved all the way from 1G in the 1980’s, up to 5G in the present.”

“When he finished, they presented us with refreshments, and we were given a tour of the server room by a different employee, where he explained how everything was working. After that, we took the bus back to our campus.”

“With this trip, i am certain we all learnt a great deal of information on many things that we will work with once we start our careers.”
